

Figure 1

Figure 1. Carefully consider

Figure 7 is a front view of a mechanical part. It shows a rectangular block with a circular feature on the top surface. The circular feature has a diameter of 2.59. The distance from the center of the circular feature to the top edge of the block is 2.14. The distance from the center of the circular feature to the right edge of the block is 0.50. The total width of the block is 1.00. The total height of the block is 0.70.

Figure 8 is a top view of the same mechanical part. It shows a rectangular block with two circular features on the top surface. The circular features have a diameter of 2.59. The distance between the centers of the two circular features is 2.14. The distance from the center of the circular feature on the right to the right edge of the block is 0.50. The total width of the block is 1.00. The total height of the block is 0.70.

1. Important: Carefully consider the maximum system pressure. The pressure rating of the manifold is dependent on the manifold material, with the port type/size a secondary consideration. Manifolds constructed of aluminum are not rated for pressures higher than 3000 psi (210 bar), regardless of the port type/size specified.
2. This drawing is for reference only. It is generated by an automated process and does not fall under Sun's document control process.
